EXPERIENCE

OpenText, Remote— *Software Engineer*

October 2021 - PRESENT

- Designed and implemented UI/UX features to enhance product usability, increasing user satisfaction by 65%.
- Developed RESTful API integrations, reducing data retrieval time by 30%.
- Collaborated with the backend team to resolve technical issues, increasing system stability by 45%.

Amazon FC, West Jordan— *Processing Assistant*

August 2020 - September 2021

- Oversaw inbound dock operations, ensuring timely and accurate receipt of inventory, processing up to 13000 units daily with 95% accuracy.
- Collaborated with the management team to coordinate staffing and resource allocation, optimizing workflow and minimizing downtime.
- Utilized Amazon's Warehouse Management System (WMS) to track inventory movement and generate reports for performance analysis.

PROJECTS

Access Manager & Advanced Authentication UI Rework

Contributed to the design and development of the user interface (UI) and user experience (UX) to ensure an intuitive and seamless user journey. Implemented and optimized API integrations, ensuring efficient and reliable data communication between the frontend and backend systems. Collaborated with the backend development team to troubleshoot and resolve technical issues, improving application performance and stability. Additionally, developed innovative methods for presenting information to users, enhancing data visualization and accessibility.

Access Manager Training Website

Developed a comprehensive website to streamline and enhance training materials for new interns in automation testing and familiarize them with the NetIQ Access Manager platform. Consolidated resources into a centralized location to improve accessibility and efficiency, thereby optimizing the training process.

SKILLS

- Agile methodology and collaboration
- Strong problem-solving and debugging skills
- Excellent communication and leadership abilities
